Job Title:

Senior Integration & Data Migration Developer

Job Location:

Riyadh

Responsibilities:

- Collaborate with Business Analysts (BAs) to understand business processes and identify technical implications.
- Analyze and interpret client technical requirements from infrastructure, integration, and data perspectives.
- Participate in discovery sessions with client technical stakeholders to gather technical and architectural needs.
- Define and document technical scope (integration/data migration) as part of the overall solution design.
- Design scalable and secure integration solutions with external systems (ERP, legacy platforms, APIs, etc.).
- Define integration architecture using REST/SOAP APIs, OData, or middleware.
- Coordinate and align integration approaches with the Creatio technical lead/team for best practices and platform alignment.
- Develop or supervise the implementation of custom integrations and ensure proper versioning, logging, and monitoring practices.
- Analyze source data structures and define data migration strategy including transformation, cleansing, and mapping.
- Define migration phases (e.g., trial, delta, final cutover) and tools/scripts required (Creatio Data Import tools, SQL, ETL tools).
- Oversee or execute data migration activities while ensuring data integrity, consistency, and minimal downtime.
- Handle error management, reconciliation, and reporting of data migration status.
- Prepare comprehensive technical specifications and scope documentation for integrations and data migration.
- Maintain clear and versioned documentation covering architecture diagrams, endpoint mappings, data dictionaries, and transformation logic.
- Define and execute integration/data migration test cases and coordinate with QA and UAT teams.
- Support client-side testing by preparing test data and helping simulate end-to-end integration scenarios.
- Troubleshoot and resolve technical issues during testing and deployment phases.
- Act as the primary technical point of contact between your team, the client's IT team, and Creatio's technical experts.
- Coordinate with Creatio technical team on technical escalations, performance optimizations, and platform-specific guidelines.
- Provide regular updates on technical deliverables, risks, and dependencies to the Project Manager/Technical Lead.

- Provide post-deployment support for integration and migration issues during stabilization.
- Support handover to managed services team including documentation, walkthroughs, and knowledge transfer sessions.

Requirements:

- Bachelor's degree in Computer Science or equivalent.
- Experience with REST/SOAP APIs, SQL, ETL processes, middleware (e.g., IBM ESB), and data mapping techniques.
- Experience in CRM, ITSM, Business Process Management, Low code / No code Projects (Preferred)
- knowledge of Creatio platform architecture, integration frameworks, and tools (Preferred)
- Strong communication skills to interface with both technical and business stakeholders.
- Experience in documenting technical requirements and preparing scope/solution design documents.
- Familiarity with data privacy, security, and compliance practices.
- English level — Upper-intermediate or higher
